Subject: Clarifications related to tender #18/2020 "Upgrading & Rehabilitation of Water Networks inside Jabaliya Camp."

After greetings,

Related to the subject mentioned above, can you clarify these items:

- 1- Related to reinstatement items 15,16,17,18 – Bill #1 , the items include the reinstatement of the roads layers , also the drawings shows the thickness of each layer to be reinstated , but if we didn't find these layers in the existing roads , are we requested to supply new materials to achieve the layers thickness as the drawings state ? also be noted that we cannot determine how much the existing layers are , and we cannot make an inspection holes to all the projects roads .
to avoid the risk, it is preferred to reinstate the existing layers with its thickness as it actually exists.
- 2- Related to reinstatement item 18 – Bill #1, the item includes the full width reinstatement for alleys 2m or less in width, its difficult to determine how much alleys are more or less than 2m in width.
to avoid the risk, it is preferred to change the item unit to square meter (m2) instead of (m).

with respect,

Mushtaha Engineering & Contracting Co
